

# Operation Manual

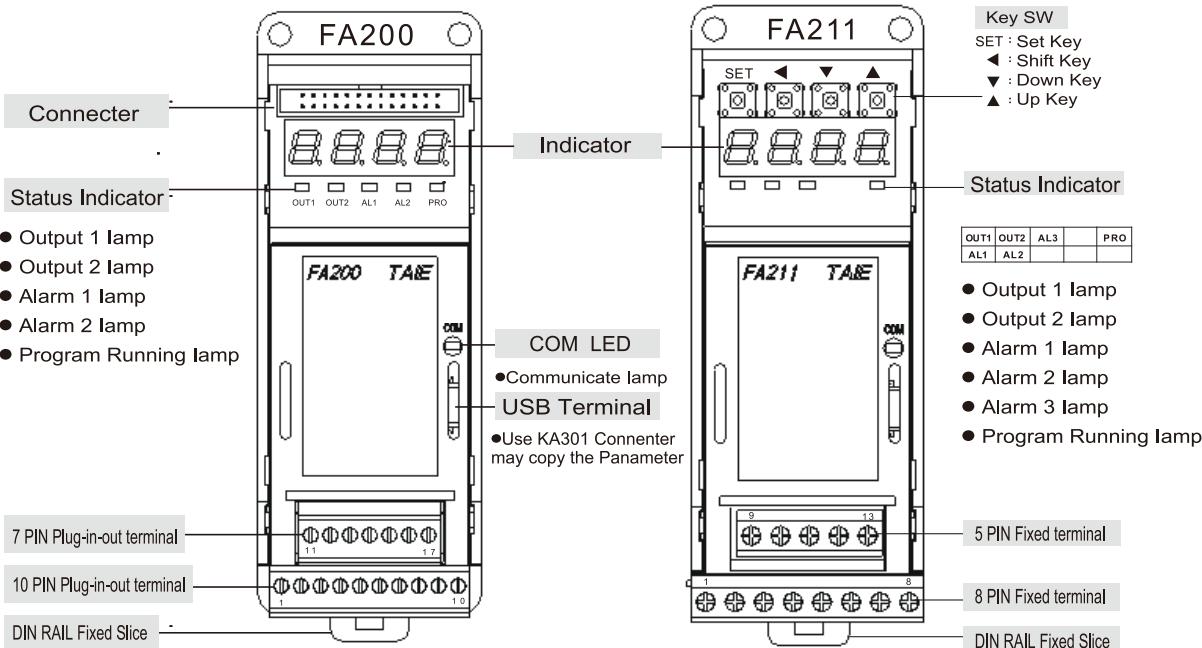

## FA200 / FA211 Modular DIN Rail Miniature Digital PID Temperature & Process Controllers

No.FA2EV1

Thanks for selecting and using our new products FA series Digital PID Temperature & Process Controllers. FA series provide super power and accurate signal analysis of analogy input and have the ability of monitor, control and high noise resistance. Provided the advance SMT manufacturing system, compact module assembly design, and high quality and high reliability to satisfy customers requirements.

FA module controllers are divided two types FA200 Advance FA211 Economic

<b>FA200 Advance Type</b>	Plug in out terminal, External operating box with double displays
<b>FA211 Economic Type</b>	Fixed terminal, Build in 4 operating keys, Single display

Please be sure the category of input signal and range before selecting & using the controllers to perform the utmost efficiency. To understand output types and specifications is match your requests or not. Please refer to this Operation Manual. Please visit our website [www.fa-taie.com.tw](http://www.fa-taie.com.tw) ~ [www.fa-taie.com](http://www.fa-taie.com) or call for our agents for assistance.

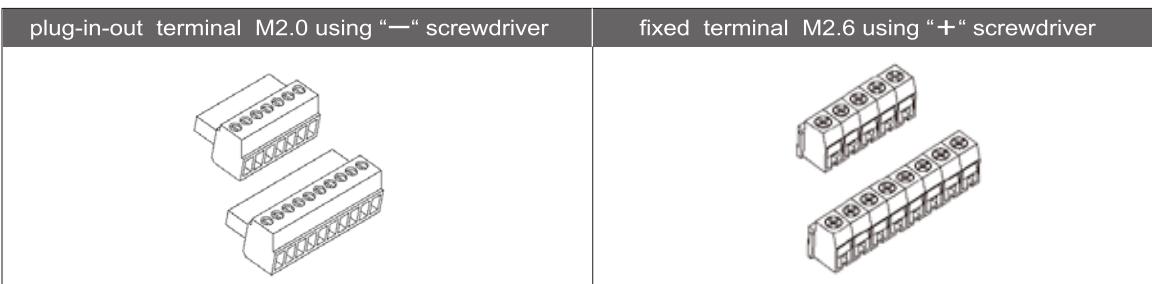

## 1. Notice

### **Danger**

1. Danger! Electric Shock!
2. Don't touch AC power wiring terminals when controller has been powered on.
3. Keep the power off until all of the wirings are completed.

## 2. Assembly & Wiring

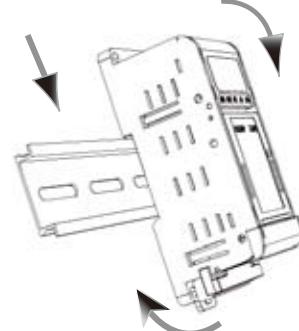

For FA200, please use plug-in-out wiring terminal => using width 2.4mm “—“ screwdriver

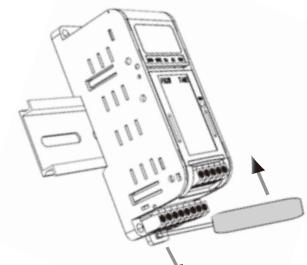

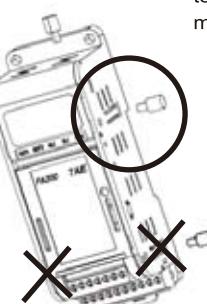

Selecting suitable electric wire of AWG 16 ~ AWG22 Lock screw torque : 0.3 N.m (3 kgf.cm)

1. Please prevent the controllers from the environment of high noise, corrosive gas and high temperature and high humidity when controllers are assembling. ( Normal operating environment : 0 ~ 50°C , 20 ~ 90%RH)
2. Power wiring must be distant from main power and load power to avoid the interference of noise.
3. To extend the wires of thermocouple input, please use the correspondent compensation leading wires.
4. To extend the wires of RTD input, please use shield wires which have the same materials among 3 wires with low resistance.
5. Please vertically install FA series by crabwise direction, hear the light voice of “Ka” to sure fixing and no loose when assembling FA series with on DIN rail.

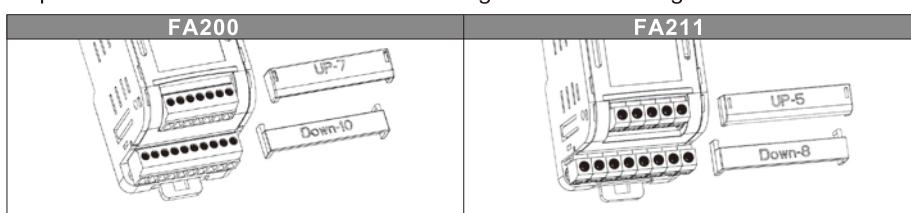

Do not insert a small interval stick in the down half both of controllers to prevent the efficiency of compensating normal temperature.

Please use attached a small interval stick in the up half both of controllers to assure the heat issuing good when many controllers set up together.

6. Separated secure cover of terminals are divided to up and down of two covers, please avoid the mistake and assure fixing when assembling

### 3. Specifications

○ Standard Spec.		Advance Type FA200	Economic Type FA211	
Outer case color		two colors of deep black & light gray are available		
Wiring terminal		Plug in out terminal	fixed terminal	
Parameter setting		by external control box or by communication	build in 4 operating keys or by communication	
Assembly		DIN rail, M4 screw hole, magnetic seat	DIN rail or M4 screw hole	
Display		External control box with double display + PV single display	single display	
Standard accessories		1 Output + 1 Alarm		
Maximum expansibility		1 Output + 2 Alarms or 2 Outputs + 1 Alarm		
Additional Option	Programmable 2 patterns by 8 segments	Yes (Option)	Yes (Option)	
	High life SSR	Yes (Option)	Yes (Option)	
	Communication	Yes (Option)	Yes (Option)	
	Motor Valve Control	Yes (Option)	No	
	TRS	Yes (Option)	No	
	Remote SV	Yes (Option)	No	
	Heater Break Alarm (HBA)	Yes (Option)	No	
○ General Spec.				
Supply Voltage	AC 85-265V			
Frequency	50 / 60 HZ			
Power Consumption	Approx 4VA			
Data Protection	EEPROM, Endurance : 1 Million write cycles, Data Retention : 10 years			
Isolated resistance	main loop –case(ground) ~ control loop – case(ground) DC500V > 10MΩ			
Dielectric Strength	main loop –case(ground) AC 1500V 1min / control loop – case(ground) AC 1000V 1min			
Vibration Endurance	10~55HZ 0.5mm (MAX 2G) XYZ various direction 2h			
Assault Endurance	100m/s2 (Approx 10G) XYZ various direction 3 times			
Protection Configuration	IP00			
Display Height of Control box	LED Module PV : 14mm SV : 10mm	without control box		
Display Height of single range LED	7 section digital display : 7mm			
Dimension	40 x 107 x 43 mm			
Weight	Appro x 115g			
Operating Ambient temperature	0~50°C			
Operating Ambient humidity	correspondent humidity 20-90% RH without dew			
Reserved Temperature	-25°C ~ + 65°C			
○ Control Features				
Control method	Heating,Cooling single output or Heating & Cooling both output PID,PI,PD,P,ON/OFF(P=0), FUZZY			
PID Parameter	P : 0.0 - 200.0% I : 0 ~3600 sec. D : 0 ~900 sec.			
Control Cycle	0~150 sec.			
○ Input Features				
Input	The point of signal point	1 point		
	Accuracy	0.2 % Full Scale ± 1digit		
	Sample time	250 ms		
	TC	K , J , R , S , B , E , N , T , W5Re/W26Re , PLII , U , L		
	RTD	PT100 , JPT100		
	mA (DC)	4-20mA , 0-20mA		
	Voltage (DC)	0-1V , 0-5V , 0-10V , 1-5V , 2-10V , -10-10mV , 0-10mV , 0-20mV , 0-50mV , 10-50mV		
	DP Position Option 0000 000.0 00.00 0.000	When using the input of sensor signal, DP position for PV can be selected the sensor code No. 1~52 When using the input of DC mA or Voltage, DP position for PV can be selected code No. 61~96 by DP Parameter.		
○ Output Features		Advance Type FA200	Economic Type FA211	
Output 1	Relay	SPDT type (a point 8A, b point 3A 220V)	SPST type (1a point 8A 220V)	
	For external SSR drive 4-20mA / 0-20mA	ON : 24V , OFF : 0V, Max. load current 20mA		
	0-5V , 0-10 V	Max. load resistance 560 Ω		
	SSR high life relay	Max. load current 20mA 1A TRIAC SSR (Option)		
Output 2	Relay	SPST type 8A 220V		
	For external SSR drive 4-20mA / 0-20mA	ON : 24V , OFF : 0V , Max. load current 20mA		
	0-5V , 0-10 V	Max. load resistance 560 Ω		
	High life relay	Max. load current 20mA 1A TRIAC SSR (Option)		
○ Communications				
		RS-485 two wires Half Duplex		
		Modbus RTU ▶ Modbus ASCII ▶ TAIE		
		8 bit		
		1 bit		
		1 bit or 2 bit		
		38400 ~ 19200 ~ 9600 ~ 4800 ~ 2400 bps		
		Parity even ▶ odd or CRC-16 ( in Modbus)		
		Connective pieces Maximum 32 pcs		
		Communicate range Maximum 1200 m		
○ Alarms				
		Alarm 1 Relay SPDT type (a point 8A, b point 3A 220V)	SPST type 1a point 8A 220V	
		Alarm 2 Relay SPST type 8A 220V		
		Alarm setting range -1999~9999 (Dot positions are different depended on the various Input Types)		

**Alarm mode type (Referenced for ALD1/ALD2/ALD3)**

(▲ SV

01	Deviation high alarm with hold action*
11	Deviation high alarm
02	Deviation low alarm with hold action*
12	Deviation low alarm
03	Deviation high/low alarm with hold action*
13	Deviation high/low alarm

04	Band alarm
14	Process high alarm with hold action*
05	Process high alarm
15	Process low alarm with hold action*
06	Process low alarm
16	

△ Alarm set value

07	Segment End alarm (Only for Programmable controller) (1) ALD1~3 , set 07 (2) ALD1~3=Alarm Segment (3) ALT1~3 defines as follows: 0 = flicker alarm 99.59 = continued alarm others = alarm ON Delay time
17	Program Run alarm (Only for Programmable controller) Run ON Stop OFF AL
08	System failed alarm* (ON) Normal OFF Failed ON AL
18	System failed alarm* (OFF) Normal ON Failed OFF AL
09	Heater Break Alarm (HBA)
00	No alarm
10	

\* Hold action:

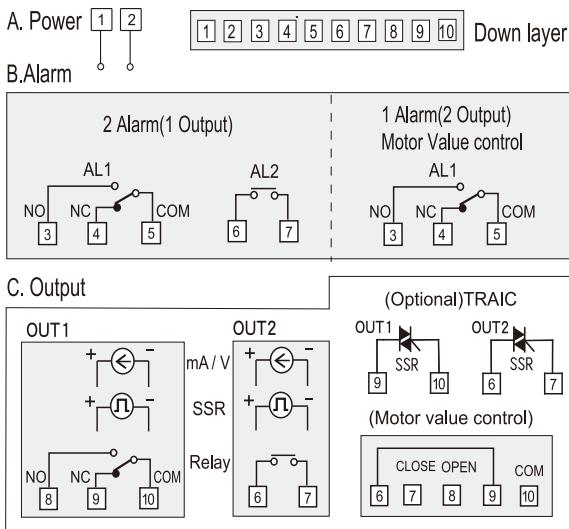

When Hold action is ON ,the alarm action is suppressed at start-up until the measured value(PV) enters the non-alarm range.

\* System failed:

It means that the controller display error message with one of following : " UUU1 " or " NNN1 " or " CJCE "

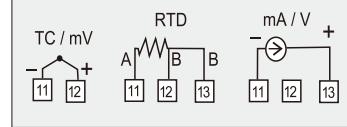

**4. Terminal Wiring Diagram****FA 200 Advance Type Plug-in-out Pitch 3.5 mm**

KA601 Outer Dimension

74 x 76 x 16 mm

Cable length 150 cm

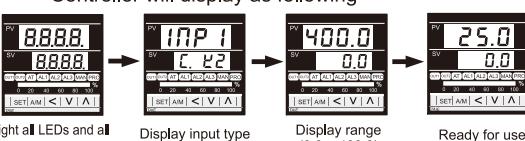

SYMBOL		NAME	FUNCTION
PV	(1)	Measured value (PV)display	Displays PV or various parameter symbols (Red)
SV	(2)	Setting value(SV)display	Displays SV or various parameter values (Green)
SET	(3)	Set Key	Pressing "SET" key before and after setting or shifting parameters to call up or save the setting value.
A/M	(4)	Auto/Manual Key	Switching between Auto (PID) and Manual output mode.
<	(5)	Shift Key	Shifting digits when settings are changed
V	(6)	Down Key	Decrease the parameters or digit being modified *Program Hold <Only for programmable controller>
A	(7)	Up Key (*Program Run)	Increase the parameters or digit being modified *Program run <Only for programmable controller>
OUT1	(8)	OUT1 lamp	Lights when OUT1 is on (Green)
OUT2	(9)	OUT2 lamp	Lights when OUT2 is on (Green)
AT	(10)	Autotuning lamp	Lights when Auto tuning is activated (Orange)
AL1	(11)	Alarm1 lamp	Lights when Alarm 1 is activated (Red)
AL2	(12)	Alarm2 lamp	Lights when Alarm 2 is activated (Red)
AL3	(13)	Alarm3 lamp	Lights when Alarm 3 is activated (Red)
MAN	(14)	Manual output lamp	Lights when manual output is activated (Orange)
PRO	(15)	*Program Running lamp	*Flashes when program running (Only for programmable controller)
OUT1%	(16)	OUT% Bar-Graph display	Output % is corresponded to display on 10-dot LED

## 7. Operations

### 1. Power ON:

Controller will display as following

Light all LEDs and all 7 segment displays

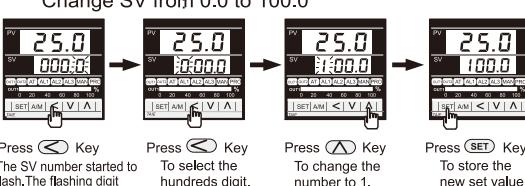

Display input type

Display range (0.0 ~ 400.0)

Ready for use

### 2. Change the Set Value(SV):

Change SV from 0.0 to 100.0

Press Key

The SV number started to flash. The flashing digit indicates which digit can be set.

Press Key

To select the hundreds digit.

Press Key

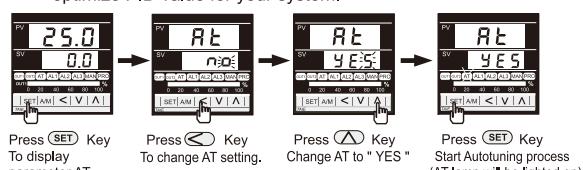

To change the number to 1.

Press Key

To store the new set value.

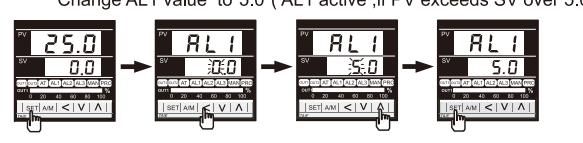

### 3. Autotuning (AT):

Use AT function to automatically calculate and set the optimize PID value for your system.

### 4. Change the Alarm value:

Change AL1 value to "5.0"( AL1 active ,if PV exceeds SV over 5.0)

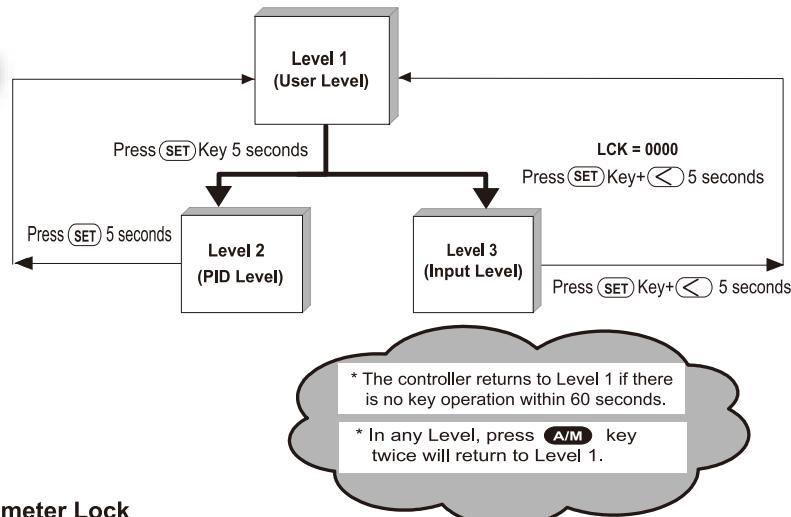

Press Key To store the new value of AL1

\* There are total 16 alarm mode types ,referenced as below:

\* To change Alarm mode, press + key 5 seconds to enter Level 3(Input Level) and then change the value of ALD1/ALD2/ALD3.

## 8. Levels Explanation

### 8.1 Levels Diagram

### 8.2 Levels in and out & Parameter Lock

Please enter in level 2 (PID level) to set the parameter LCK which can be changed

LCK	Levels entering available			Parameters which can be changed
	Level 1 (User Level)	Level 2 (PID Level)	Level 3 (Input Level)	
0000	Yes	Yes	Yes	All parameters (Factory set value)
1111	Yes	Yes	No	
0100	Yes	Yes	No	
0110	Yes	Yes	No	Parameters in Level 1
0001	Yes	Yes	No	SV" and "LCK"
0101	Yes	Yes	No	Only "LCK"

## 9. Parameters List

### Level 1 (User Level)

Process Value	P1' 5.0
Set Value	↓ Set
Output Limit	OUTL 1000
Autotuning	AT YES/no
Alarm1 set value	RL1 0.0
Heater current display (HBA set value)	c 0.0 0.0
Alarm 2 set value	RL2 0.0
Alarm 3 set value	RL3 0.0

### Level 2 (PID Level)

P1' 5.0	Proportional band 1 (For output 1)	Range : 0.0~200.0% ON/OFF control if set to 0 (0.0)
OUTL 1000	Integral time 1 (For output 1)	Range : 0~3600 seconds PD control if set to 0
AT YES/no	Derivative time 1 (For output 1)	Range : 0~900 seconds PI control if set to 0
RL1 0.0	Dead-band time	Don't care
c 0.0 0.0	Auto tuning offset value	Range : 0~USPL
RL2 0.0	Output 1 cycle time	Range : 0~150 seconds Relay output :10 Voltage pulse output : 1 , mA output :0
RL3 0.0	Hysteresis for output 1 ON/OFF control	Range : 0~1000
P1' 5.0	Proportional band 2 (For output 2)	The same with P1
↓ Set	Integral time 2 (For output 2)	The same with I1
↓ Set	Derivative time 2 (For output 2)	The same with D1
↓ Set	Output 2 Cycle time	The same with CYT1
↓ Set	Hysteresis for output 2 ON/OFF control	The same with HYS1
GRP1 0	Control gap 1 (For output 1)	Set point of output 1 (Heating side) =SV - GAP1
GRP2 0	Control gap 2 (For output 2)	Set point of output 2 (Cooling side) =SV + GAP2
LCK 0000	Function lock	

Return to "P1"

## Level 3 (Input Level)

Set LCK to "0000" and then press **SET** Key+shift (**◀**) Key 5 seconds to enter level 3

<b>INP1</b>	Input type selection	<b>CH02</b>	Output 2 high limit calibration (Used for mA and V output)	The same with CHO1
<b>RNL1</b>	Analog input low limit calibration (Used for mA and V input)	<b>CLO3</b>	Retransmission low limit calibration	The same with CLO1
<b>RNH1</b>	Analog input high limit calibration (Used for mA and V input)	<b>CHO3</b>	Retransmission high limit calibration	The same with CHO1
<b>dP</b>	Decimal point position (Available for mA and V input)	<b>rU.CY</b>	Full run time of proportional motor ( Used for proportional motor valve control output)	Range : 5~200 seconds
<b>LSP.L</b>	Lower Set-Point Limit	<b>UR.L</b>	Used for programmable controller to wait continued operation	0=Not wait Others=Wait value
<b>USP.L</b>	Upper Set-Point Limit	<b>SETR</b>		
<b>RNL2</b>	Remote input low limit calibration	<b>PSL</b>	Communication Protocol Selection	MODBUS RTU / MODBUS ASCII / TIAE
<b>RNH2</b>	Remote input high limit calibration	<b>bLS</b>	Communication Bits Configuration	O_81 / O_82 / E_81 / E_82
<b>ALd1</b>	Alarm mode of AL1	<b>ID.NO</b>	ID number	Range : 0 ~ 255
<b>ALt1</b>	Alarm time of AL1	<b>BRUD</b>	Baudrate	2400 / 4800 / 9600 / 19200 / 38400 bps
<b>ALd2</b>	Alarm mode of AL2	<b>SV'05</b>	SV compensation	Range : -1000~1000
<b>ALt2</b>	Alarm time of AL2	<b>PV'05</b>	PV compensation	Range : -100.0~500.0
<b>ALd3</b>	Alarm mode of AL3	<b>UNIT</b>	Unit of PV & SV	C(°C) / F(°F) / A(Analog)
<b>ALt3</b>	Alarm time of AL3	<b>PV'FT</b>	PV Filter	PV will respond faster if PVFT is smaller.
<b>HYSR</b>	Hysteresis of all Alarm	<b>CRSC</b>	Reserved	
<b>CLO1</b>	Output 1 low limit calibration (Used for mA and V output)	<b>OPd</b>	Action mode	Heat / Cool
<b>CHO1</b>	Output 1 high limit calibration (Used for mA and V output)	<b>OPRd</b>	Control algorithm	PID / Fuzzy
<b>CLO2</b>	Output 2 low limit calibration (Used for mA and V output)	<b>HZ</b>	Frequency	50 / 60HZ

Return to "INP1"

## 10. Order Information

★ Factory basic value: FA200-101000-02A FA211-101000-02A

Model	Output 1	Output 2	Alarm	Transmission	Remote SV	Communication	Input Type	Power
